

## EasyLink® MailWatch Service Virus Blocking, Spam Blocking and Content Filtering

Protect your network against viruses, spam, offensive content and oversized attachments. MailWatch blocks messages that negatively affect network and employee productivity, plus content that can expose your organization to legal liability.

The first step toward protecting your business from potential problems is to enhance your e-mail system with MailWatch Service.

### Service Overview

EasyLink's MailWatch is a fully outsourced boundary service that lets you:

- **stop** viruses before they reach your network
- **filter** sexually and/or racially offensive content
- **block** unwanted spam and junk e-mail
- **control** e-mail attachment type and size
- **limit** corporate e-mail abuse

### Virus Blocking

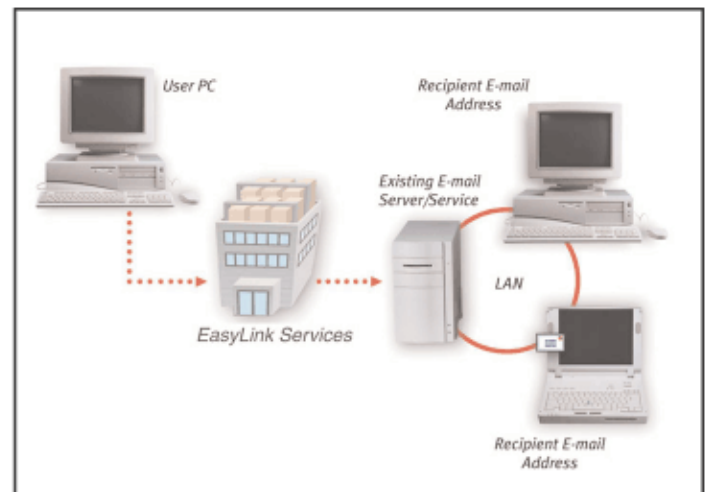

According to Ferris Research, e-mail borne viruses account for at least 95% of all attacks reaching the desktop. MailWatch uses highly-advanced anti-virus technology to detect and block more than 40,300 known viruses, and their variants that can be embedded in e-mail attachments. Definitions are updated as the latest threats are detected, ensuring uninterrupted protection for local, remote and distributed users.

### Spam control and content filtering

Racially and sexually offensive jokes are no laughing matter — especially when the punchline is a cash settlement. MailWatch allows you to take control of your e-mail and protect your users against both generic spam and e-mail with offensive content. You can even customize MailWatch to prevent leaks of confidential company information.

### Attachment control

MailWatch gives you the option to block oversized attachments, such as audio, video and executable files, to keep your employees on task and your servers running smoothly.

*MailWatch uses highly-advanced anti-virus technology to detect and block more than 40,300 known viruses.*

### How It Works

MailWatch requires no additional hardware or software. Just a simple change to the MX (mail transfer) record and your corporate e-mail is protected. Routing all incoming and outbound messages through MailWatch servers, where they are thoroughly screened, takes less than 5 seconds to complete and is transparent to both sender and recipient.

#### Three-step process secures e-mail

1. When an e-mail message is forwarded to MailWatch, the message is deconstructed and all attachments are uncompressed.
2. The attachments and components are scanned, according to your present preferences.
3. The message is reassembled. Clean messages are delivered. Suspect messages are quarantined.

Suspect messages are withheld while an alert is delivered to the sender, recipient and system administrator. Messages are automatically deleted after five days, unless they are released by the system administrator.

## EasyLink Boundary Services

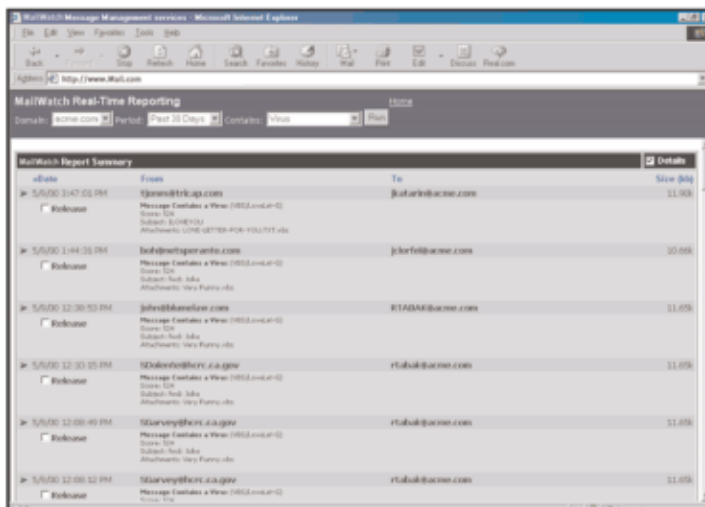

### Exclusion lists

An intuitive Web-based interface makes it a snap to customize configurations for each individual.

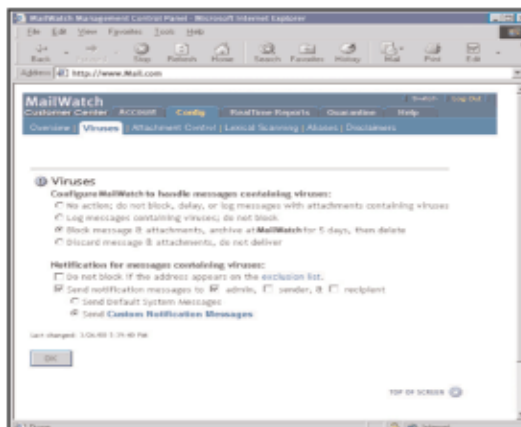

### Monitoring

Use MailWatch's *RealTime Reporter* to monitor system activity and to release blocked messages.

### MailWatch Control Panel

*Easy-to-configure Web-based control panels simplify administration of your MailWatch services. Real-time reporting features are available to monitor system activity and to provide information on the latest threats to your e-mail network.*

## Choose the industry leader for reliable, cost-effective business messaging solutions.
